TEST REPORT

Report No: GK2024-0037E

1030, Gyeongchung-daero, Ganam-eup, Yeoju-si, Gyeonggi-do, 12661, Korea

1. Client

o Name: Lee, Suckwoo, Saint-Gobain Isover Korea Co., Ltd

O Address: #1, 70, Bugokgongdan 1-gil, Songak-eup, Dangjin-si, Chungcheongnam-do, Korea

• Date of Receipt: 2024. 1. 18.

2. Test specimen: Sound Safe Board 64 kg/m³ 50 mm

3. Date of Test: 2024. 1. 19.

4. Use of Report: Capability Verification

5. Location of Test : ■ Permanent Testing Lab □ On Site Testing

(Address: the same as the address of FILK)

6. Test method: KS F 2805: 2014

7 Test Environment : Temperature : (20 \pm 1) °C, Humidity : (55 \pm 5) % R.H.

8 Test Results

Test	Frequency	Sound absorption	Frequency	Sound absorption	Reference				
	(Hz)	$coefficient(a_s)$	(Hz)	$coefficient(a_s)$

Report No: GK2024-0037E Page(2)/(8)Pages

1. SUMMARY

The purpose of the test was to determine the sound absorption coefficient and noise reduction coefficient(NRC) of the specimen through the acoustic test in accordance with KS F 2805:2014 (Measurement of sound absorption in a reverberation room).

2. CONSTRUCTION OF THE TEST SPECIMEN

The test specimen supplied and constructed by Saint-Gobain Isover Korea Co., Ltd as shown in **Table 1**. (See Appendix 1, 2.)

2.1 Test specimen: Sound Safe Board 64 kg/m³ 50 mm

2.2 Test specimen size: Width 3000 mm × Length 4000 mm × Depth 50 mm (Area: 12 m²)

⟨Table 1⟩ Material components and arrange of the specimens

(Dimension: mm)

Material components							
Specimen unit size	Width 1000 × Length 2000 × Depth 50						
Installation of specimen	Sound Safe Board 64 kg/m³ 50						

2.3 The details of the specimen was shown in appendix 1.

3. TEST PROCEDURE

3.1 Measuring Position and Repeat

The reverberation time of the room with and without the specimen were measured 20 times at 5 microphone points in reverberation room.

The microphone positions were located in the reverberation room with distance of not less than 2 m from sound source and 1.5 m from other measuring positions, and the distance between the specimen and wall boundary was 1 m at least.

FILK

a Subsidiary of KFPA

Report No: GK2024-0037E Page(3)/(8)Pages

3.2 Equivalent Sound Absorption Area of The Empty Reverberation Room (A_1)

The equivalent sound absorption area of the empty reverberation room, $A_{\rm I}({\rm m}^2)$ were calculated by equation (1) as follows

$$A_{1} = \frac{55.3 V}{c T_{1}} - 4 V m_{1} \qquad ----- (1)$$

where

V: Volume of the empty reverberation room(m^3)

c: Propagation speed of sound in air($c = 331+0.6 \ t/^{\circ}C$, m/s)

 T_1 : Reverberation time of the empty reverberation room(s)

 m_1 : Power attenuation coefficient in the empty reverberation room (m^{-1})

 $(m = \alpha/10\log(e), \alpha$; sound absorption coefficient in the atmospheric pressure)

3.3 Equivalent Sound Absorption Area of The Reverberation Room with The Test Specimen (A_2) The equivalent sound absorption area of the reverberation room with the test specimen, A_2 (m^2) were calculated by equation (2) as follows

$$A_{2} = \frac{55.3 V}{c T_{2}} - 4 V m_{2} \qquad ----- (2)$$

where

 T_2 : Reverberation time of the empty reverberation room(s)

 m_2 : Power attenuation coefficient in the reverberation room with the test specimen (m^{-1})

 $(m = \alpha/10\log(e), \alpha : \text{ sound absorption coefficient in the atmospheric pressure})$

3.4 Equivalent Sound Absorption Area of The Test Specimen (A_T)

The equivalent sound absorption area of the test specimen, $A_{\rm T}({\rm m}^2)$ were calculated by equation (3) as follows

$$A_T = A_2 - A_1 = 55.3 V(\frac{1}{c_2 T_2} - \frac{1}{c_1 T_1}) - 4 V(m_2 - m_1)$$
 ---- (3)

where

 c_1 : Propagation speed of sound in air at the temperature $t_1(m/s)$

 c_2 : Propagation speed of sound in air at the temperature $t_2(m/s)$

FILK

a Subsidiary of KFPA

Report No: GK2024-0037E Page(4)/(8)Pages

3.5 Sound absorption coefficient (α_s)

The sound absorption coefficient, α_s , of a plane absorber or a specified array of test objects were calculated by equation (4) as follows

where .

 $A_{\rm T}$: Equivalent sound absorption area of the test specimen(m²)

S: Area covered by the test specimen(m^2)

3.6 Frequency Range of Measurements

From 100 Hz to 5 000 Hz (Defined as one-third octave band)

4. TEST FACILITY

4.1 Test Room

The structure of the test room is made of reinforced concrete in thickness of 300 mm.

The shape of the reverberation room is irregular polyhedrons and the volume is 200 m³ with seven faces.

4.2 Test Instrument

4.2.1 Sound Source

- · Broad band noise with amplifier and loudspeaker
- Instrument model: B&K 4296 made in Denmark

4.2.2 Microphone

- · Omni-directional microphone
- Instrument model: B&K 4942 made in Denmark

4.2.3 Sound Level Analyser

- Real-time frequency analyser
- Instrument model: B&K PULSE made in Denmark

Report No: GK2024-0037E Page(5)/(8)Pages

5. TEST RESULTS

As the results of the tests, the sound absorption coefficient (α_s) and NRC of each specimen was evaluated as shown in table 2.

⟨Table 2⟩ TEST RESULTS
